

WATS 3010 Intro to Bootstrap

Task List

Update index.html per to-do requirements

1. Add proper viewport meta tag to make page properly display on mobile devices.
2. Implement responsive navigation that matches your IA design.
3. Put nav on every page.
4. Add images to your repository and update this code so the carousel has proper slides.
5. Add the proper "row" and "col" classes to make this display work the way it should.
6. User flex-box to replace the centered paragraph with copyright and date with 2 paragraphs: the first paragraph is left aligned and contains copyright and date and one that is right aligned and contains your name.
7. Put the footer on every page.

Create Pages

- About page with images
- Shows page with links
- Music page with image and link to purchase
- Contact/booking page with email link
